

Andrew Rayner

“My role is very dynamic. I work closely with many different teams and an array of people that are very highly skilled and motivated”.

Andrew Rayner is employed at the National Australia Bank head office in Melbourne. He commenced work with the Nab in 2004 as part of their graduate program and has progressed to Systems Analyst Programmer and team leader.

“My day-to-day activities include java/J2EE development, UNIX and batch scripting, application deployments, job scheduling, compliance requirements, process requirements and documentation.

Andrew completed the Bachelor of Computing with Honors at UB in 2003.

“One of the main reasons I chose the University of Ballarat was the appeal of a rural university.

”Growing up in the small town of Lorne I was not quite ready to make the move to Melbourne and be part of a large University with hundreds of students in each class. UB was a good stepping-stone for my career development. The small class sizes and the approachability of lecturers and tutors is of huge benefit. I found it easy to build good relationships with staff and students and have managed to keep in touch with them.

“The University of Ballarat has a very welcoming environment that encourages students to learn and build the skills required in the ‘real world’. A degree at UB will deliver you fantastic career options, new friends, and a very memorable and enjoyable University experience!”
