## **Part I**

<b>Preface of the Book</b>	<b>ix</b>
<b>Numbering System</b>	<b>xix</b>
<b>Acronyms</b>	<b>xxi</b>
<b>Glossary of Notation</b>	<b>xxiii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Problem Description . . . . .	2
1.1.1 Affine problems . . . . .	7
1.2 Relations Between Problem Classes . . . . .	8
1.3 Integrability and the KKT System . . . . .	12
1.3.1 Constrained optimization problems . . . . .	13
1.3.2 The Karush-Kuhn-Tucker system . . . . .	18
1.4 Source Problems . . . . .	20
1.4.1 Saddle problems . . . . .	21
1.4.2 Nash equilibrium problems . . . . .	24
1.4.3 Nash-Cournot production/distribution . . . . .	26
1.4.4 Economic equilibrium problems . . . . .	36
1.4.5 Traffic equilibrium models . . . . .	41
1.4.6 Frictional contact problems . . . . .	46
1.4.7 Elastoplastic structural analysis . . . . .	51
1.4.8 Nonlinear obstacle problems . . . . .	55
1.4.9 Pricing American options . . . . .	58
1.4.10 Optimization with equilibrium constraints . . . . .	65
1.4.11 CPs in SPSD matrices . . . . .	67
1.5 Equivalent Formulations . . . . .	71
1.5.1 Equation reformulations of the NCP . . . . .	71
1.5.2 Equation reformulations of the VI . . . . .	76
1.5.3 Merit functions . . . . .	87
1.6 Generalizations . . . . .	95
1.7 Concluding Remarks. . . . .	98
1.8 Exercises . . . . .	98
1.9 Notes and Comments . . . . .	113

<b>2</b>	<b>Solution Analysis I</b>	<b>125</b>
2.1	Degree Theory and Nonlinear Analysis . . . . .	126
2.1.1	Degree theory . . . . .	126
2.1.2	Global and local homeomorphisms . . . . .	134
2.1.3	Elementary set-valued analysis . . . . .	138
2.1.4	Fixed-point theorems . . . . .	141
2.1.5	Contractive mappings . . . . .	143
2.2	Existence Results . . . . .	145
2.2.1	Applications to source problems . . . . .	150
2.3	Monotonicity . . . . .	154
2.3.1	Plus properties and F-uniqueness . . . . .	162
2.3.2	The dual gap function . . . . .	166
2.3.3	Boundedness of solutions . . . . .	168
2.4	Monotone CPs and AVIs . . . . .	170
2.4.1	Properties of cones . . . . .	171
2.4.2	Existence results . . . . .	175
2.4.3	Polyhedrality of the solution set . . . . .	180
2.5	The VI $(K, q, M)$ and Coptimality . . . . .	185
2.5.1	The CP $(K, q, M)$ . . . . .	192
2.5.2	The AVI $(K, q, M)$ . . . . .	199
2.5.3	Solvability in terms of feasibility . . . . .	202
2.6	Further Existence Results for CPs . . . . .	208
2.7	A Frictional Contact Problem . . . . .	213
2.8	Extended Problems . . . . .	220
2.9	Exercises . . . . .	226
2.10	Notes and Comments . . . . .	235
<b>3</b>	<b>Solution Analysis II</b>	<b>243</b>
3.1	Bouligand Differentiable Functions . . . . .	244
3.2	Constraint Qualifications . . . . .	252
3.3	Local Uniqueness of Solutions . . . . .	266
3.3.1	The critical cone . . . . .	267
3.3.2	Conditions for local uniqueness . . . . .	271
3.3.3	Local uniqueness in terms of KKT triples . . . . .	279
3.3.4	Local uniqueness theory in NLP . . . . .	283
3.3.5	A nonsmooth-equation approach . . . . .	287
3.4	Nondegenerate Solutions . . . . .	289
3.5	VIs on Cartesian Products . . . . .	292
3.5.1	Semicopositive matrices . . . . .	294
3.5.2	P properties . . . . .	298

3.6	Connectedness of Solutions . . . . .	309
3.6.1	Weakly univalent functions . . . . .	310
3.7	Exercises . . . . .	317
3.8	Notes and Comments . . . . .	330
<b>4</b>	<b>The Euclidean Projector and Piecewise Functions</b>	<b>339</b>
4.1	Polyhedral Projection . . . . .	340
4.1.1	The normal manifold . . . . .	345
4.2	Piecewise Affine Maps . . . . .	352
4.2.1	Coherent orientation . . . . .	356
4.3	Unique Solvability of AVIs . . . . .	371
4.3.1	Inverse of $\mathbf{M}_K^{\text{nor}}$ . . . . .	374
4.4	B-Differentiability under SBCQ . . . . .	376
4.5	Piecewise Smoothness under CRCQ . . . . .	384
4.6	Local Properties of $\text{PC}^1$ Functions . . . . .	392
4.7	Projection onto a Parametric Set . . . . .	401
4.8	Exercises . . . . .	407
4.9	Notes and Comments . . . . .	414
<b>5</b>	<b>Sensitivity and Stability</b>	<b>419</b>
5.1	Sensitivity of an Isolated Solution . . . . .	420
5.2	Solution Stability of B-Differentiable Equations . . . . .	427
5.2.1	Characterizations in terms of the B-derivative . . . . .	439
5.2.2	Extensions to locally Lipschitz functions . . . . .	443
5.3	Solution Stability: The Case of a Fixed Set . . . . .	445
5.3.1	The case of a finitely representable set . . . . .	452
5.3.2	The NCP and the KKT system . . . . .	462
5.3.3	Strong stability under CRCQ . . . . .	469
5.4	Parametric Problems . . . . .	472
5.4.1	Directional differentiability . . . . .	482
5.4.2	The strong coherent orientation condition . . . . .	489
5.4.3	$\text{PC}^1$ multipliers and more on SCOC . . . . .	496
5.5	Solution Set Stability . . . . .	500
5.5.1	Semistability . . . . .	503
5.5.2	Solvability of perturbed problems and stability . . . . .	509
5.5.3	Partitioned VIs with $P_0$ pairs . . . . .	512
5.6	Exercises . . . . .	516
5.7	Notes and Comments . . . . .	525
<b>6</b>	<b>Theory of Error Bounds</b>	<b>531</b>
6.1	General Discussion . . . . .	531

6.2	Pointwise and Local Error Bounds . . . . .	539
6.2.1	Semistability and error bounds . . . . .	539
6.2.2	Local error bounds for KKT triples . . . . .	544
6.2.3	Linearly constrained monotone composite VIs . . . . .	548
6.3	Global Error Bounds for VIs/CPs . . . . .	554
6.3.1	Without Lipschitz continuity . . . . .	557
6.3.2	Affine problems . . . . .	564
6.4	Monotone AVIs . . . . .	575
6.4.1	Convex quadratic programs . . . . .	586
6.5	Global Bounds via a Variational Principle . . . . .	589
6.6	Analytic Problems . . . . .	596
6.7	Identification of Active Constraints . . . . .	600
6.8	Exact Penalization and Some Applications . . . . .	605
6.9	Exercises . . . . .	610
6.10	Notes and Comments . . . . .	616

<b>Bibliography of Part I</b>	<b>I-1</b>
-------------------------------	------------

<b>Index of Definitions and Results</b>	<b>I-51</b>
---	-------------

<b>Index of Key Words</b>	<b>I-57</b>
---------------------------	-------------

## Part II

<b>7</b>	<b>Local Methods for Nonsmooth Equations</b>	<b>625</b>
7.1	Nonsmooth Analysis I: Clarke's Calculus . . . . .	626
7.2	Basic Newton-type Methods . . . . .	638
7.2.1	Piecewise smooth functions . . . . .	656
7.2.2	Composite maps . . . . .	661
7.3	A Newton Method for VIs . . . . .	663
7.4	Nonsmooth Analysis II: Semismooth Functions . . . . .	674
7.4.1	$SC^1$ functions . . . . .	686
7.5	Semismooth Newton Methods . . . . .	692
7.5.1	Linear Newton approximation schemes . . . . .	703
7.6	Exercises . . . . .	708
7.7	Notes and Comments . . . . .	715
<b>8</b>	<b>Global Methods for Nonsmooth Equations</b>	<b>723</b>
8.1	Path Search Algorithms . . . . .	724
8.2	Dini Stationarity . . . . .	736
8.3	Line Search Methods . . . . .	739

8.3.1	Sequential convergence . . . . .	753
8.3.2	Q-superlinear convergence . . . . .	757
8.3.3	SC <sup>1</sup> minimization . . . . .	764
8.3.4	Application to a complementarity problem . . . . .	766
8.4	Trust Region Methods . . . . .	771
8.5	Exercise . . . . .	786
8.6	Notes and Comments . . . . .	788
<b>9</b>	<b>Equation-Based Algorithms for CPs</b>	<b>793</b>
9.1	Nonlinear Complementarity Problems . . . . .	794
9.1.1	Algorithms based on the FB function . . . . .	798
9.1.2	Pointwise FB regularity . . . . .	809
9.1.3	Sequential FB regularity . . . . .	816
9.1.4	Nonsingularity of Newton approximation . . . . .	822
9.1.5	Boundedness of level sets . . . . .	826
9.1.6	Some modifications . . . . .	833
9.1.7	A trust region approach . . . . .	839
9.1.8	Constrained methods . . . . .	844
9.2	Global Algorithms Based on the min Function . . . . .	852
9.3	More C-Functions . . . . .	857
9.4	Extensions . . . . .	865
9.4.1	Finite lower (or upper) bounds only . . . . .	865
9.4.2	Mixed complementarity problems . . . . .	866
9.4.3	Box constrained VIs . . . . .	869
9.5	Exercises . . . . .	877
9.6	Notes and Comments . . . . .	882
<b>10</b>	<b>Algorithms for VIs</b>	<b>891</b>
10.1	KKT Conditions Based Methods . . . . .	892
10.1.1	Using the FB function . . . . .	892
10.1.2	Using the min function . . . . .	909
10.2	Merit Functions for VIs . . . . .	912
10.2.1	The regularized gap function . . . . .	913
10.2.2	The linearized gap function . . . . .	921
10.3	The D-Gap Merit Function . . . . .	930
10.3.1	The implicit Lagrangian for the NCP . . . . .	939
10.4	Merit Function Based Algorithms . . . . .	947
10.4.1	Algorithms based on the D-gap function . . . . .	947
10.4.2	The case of affine constraints . . . . .	966
10.4.3	The case of a bounded $K$ . . . . .	969

10.4.4	Algorithms based on $\theta_c$ . . . . .	975
10.5	Exercises . . . . .	978
10.6	Notes and Comments . . . . .	981
<b>11</b>	<b>Interior and Smoothing Methods</b>	<b>989</b>
11.1	Preliminary Discussion . . . . .	991
11.1.1	The notion of centering . . . . .	993
11.2	An Existence Theory . . . . .	996
11.2.1	Applications to CEs . . . . .	1000
11.3	A General Algorithmic Framework . . . . .	1003
11.3.1	Assumptions on the potential function . . . . .	1003
11.3.2	A potential reduction method for the CE . . . . .	1006
11.4	Analysis of the Implicit MiCP . . . . .	1012
11.4.1	The differentiable case . . . . .	1016
11.4.2	The monotone case . . . . .	1022
11.4.3	The KKT map . . . . .	1031
11.5	IP Algorithms for the Implicit MiCP . . . . .	1036
11.5.1	The NCP and KKT system . . . . .	1043
11.6	The Ralph-Wright IP Approach . . . . .	1053
11.7	A Path-Following Noninterior Method . . . . .	1060
11.8	Smoothing Methods . . . . .	1072
11.8.1	A Newton smoothing method . . . . .	1078
11.8.2	A class of smoothing functions . . . . .	1084
11.9	Excercises . . . . .	1092
11.10	Notes and Comments . . . . .	1097
<b>12</b>	<b>Methods for Monotone Problems</b>	<b>1107</b>
12.1	Projection Methods . . . . .	1107
12.1.1	Basic fixed-point iteration . . . . .	1108
12.1.2	Extragradient method . . . . .	1115
12.1.3	Hyperplane projection method . . . . .	1119
12.2	Tikhonov Regularization . . . . .	1125
12.2.1	A regularization algorithm . . . . .	1133
12.3	Proximal Point Methods . . . . .	1135
12.3.1	Maximal monotone maps . . . . .	1135
12.3.2	The proximal point algorithm . . . . .	1141
12.4	Splitting Methods . . . . .	1147
12.4.1	Douglas-Rachford splitting method . . . . .	1147
12.4.2	Forward-backward splitting method . . . . .	1153
12.5	Applications of Splitting Algorithms . . . . .	1164

12.5.1	Projection algorithms revisited . . . . .	1165
12.5.2	Applications of the Douglas-Rachford splitting . . .	1171
12.6	Rate of Convergence Analysis . . . . .	1176
12.6.1	Extragradient method . . . . .	1178
12.6.2	Forward-backward splitting method . . . . .	1180
12.7	Equation Reduction Methods . . . . .	1183
12.7.1	Recession and conjugate functions . . . . .	1184
12.7.2	Bregman-based methods . . . . .	1187
12.7.3	Linearly constrained VIs . . . . .	1204
12.7.4	Interior and exterior barrier methods . . . . .	1209
12.8	Exercises . . . . .	1214
12.9	Notes and Comments . . . . .	1222
