

## **Chapter 1: INTRODUCTION**

1.1 Optimization : A Little History

1.2 Definitions and Basic Facts

1.3 Conditions for a Minimum

## **Chapter 2: ELEMENTS OF CONVEX ANALYSIS**

2.1 Convex Sets and Separation Theorems

2.2 Polyhedral Convex Sets and Farkas lemma

2.3 Convex Functions : Basic Properties and Generalizations

2.4 Subdifferentials and Calculus Rules

2.5 Tangent and Normal Cones

2.6 Theorems of the Alternative

## **Chapter 3: KARUSH-KUHN-TUCKER CONDITIONS**

3.1 Unconstrained Minimization

3.2 Fritz-John Conditions

3.3 Karush-Kuhn-Tucker Conditions

3.4 Generalized Convexity and Sufficiency

3.5 Equality Constraints

## **Chapter 4: CONVEX OPTIMIZATION**

4.1 The Basic Problem

4.2 Convex Optimization with Inequality Constraints

4.3 Saddle Point Conditions

4.4 Convex Optimization with Mixed Constraints

## **Chapter 5: NONSMOOTH OPTIMIZATION**

5.1 Clarke Subdifferential and Related Results

5.2 Clarke Tangent and Normal Cones

- 5.3 Optimality Conditions in Lipschitz Optimization
- 5.4 Applications to Strict Minimization
- 5.5 Generalized Convexity and Nonsmoothness
- 5.6 Quasidifferentials and Optimality Conditions
- 5.7 Subdifferentials of Non-Lipschitz Functions: Some Ideas

## **Chapter 6: DUALITY**

- 6.1 The Value Function and Lagrangian Duality
- 6.2 Fenchel Duality
- 6.3 Fractional Programming Duality
- 6.4 Nonlinear Lagrangian and Nonconvex Duality

## **Chapter 7: MONOTONE AND GENERALIZED MONOTONE MAPS**

- 7.1 Motivation
- 7.2 Convexity and Monotonicity
- 7.3 Subdifferential as a Monotone Map
- 7.4 Quasimonotone and Pseudomonotone maps
